• Freeware plug-in for high-quality acoustical piano sounds • Twelve strings with adjustable damping and decay time • PSP PianoVerb System • Lower octaves – bigger and less resonant sound • Higher octaves – bright, harp-like effect.. Lexicon PSP 42 has been carefully designed to accurately reproduce the flexibility and warmth of this renowned classic device.. PSP Vintage Warmer also incorporates professional VU and PPM metering together with accurate overload indicators, assuring results of highest quality.. • Total high frequency transparency (double sampled processing) • Low distortion (optional Smooth Level Detector algorithm) • Side chain filtering, channel linking and compression tilting controls • Mix control allows for fine blending between the processed and clean signal • Optional high-quality brick wall output limiter • Advanced PPM/VU meters with adjustable parameters.. Lexicon PSP 42 Lexicon PSP 42 is a high-quality digital stereo delay and phrase sampler plug-in based on the legendary Lexicon PCM 42 processor, famous for its distinctive sound and unique concept.. PSP PianoVerb PSP PianoVerb is a freeware plug-in, which reproduces a special kind of reverberation originally provided by piano strings.. And indeed, these high-quality plug-ins meet the demands of the most challenging home mastering and live tracking situations.

From vintage-warm compressor and EQ plug-ins to kaleidoscope-like modulation effects over to authentic reproductions of award-winning analog classics — producers, musicians, mixing and post-production engineers around the globe rely on the exceptional quality of PSP's product portfolio.. And also I think there might be. Transposing to lower octaves produces a bigger and less resonant sound similar to traditional reverbs, while transposing to higher octaves produces a very bright, harp-like effect.. This plug-in is not based on any specific hardware, it is rather inspired by vintage circuits and is designed to emulate some important characteristics of such compressors.. PSP Audioware PSP is well-known for its high-quality audio effect and processor plug-ins.. Each of them is tuned to a particular note starting from A (55 Hz) to G# (103 8 Hz).. The PSP PianoVerb string system can be transposed in the range of +-24 semitones, tuned within a range of +-100 cents and can also be detuned.. The plug-in has been designed under consideration of preserving maximum signal quality at every processing stage.. The plug-in processor is highly flexible and can be used for both soft-knee compression and brick-wall limiting.. PSP's goal was to design a processor that can assist users in taming the sterility and harshness often heard in digital recordings.

I have the old 32 bit 'Nitro' in my user account for years, not used Then at the same time I consider some specialised filter-plug(s) mainly for dub-wise and steppers tunes.. • Up to four sound processing operators at a time • Available types include: filters, eq, delay, reverb, etc.. Generally I think the the new Nitro is priced to high, the normal upgrade price on 99 USD.. These EQs are CPU efficient enough to be used at every stage of the creative process, from composition to tracking to final production/mixing/mastering.. Although these EQs are easy to use, we expanded their functionality with several features including variable high pass filters or switchable steepness for the shelving filters.. Its double-precision (64-bit floating point) and double-sampled (FAT – Frequency Authentication Technique) processing offers transparency even at extreme compression settings and high sample rates.. The high-quality sound processing modules can be routed in any configuration, allowing for endless musical journeys.. • C ollection of six high-resolution and high-quality audio processors • Designed to improve the quality of your digital mixes • Made for challenging home mastering and live tracking situations • 64-bit double precision floating point algorithms • Up to 192 kHz sample rate..
